

Faster and better

Accelerating information delivery over any network

Deployed by more than 2000 service providers in over 40 countries, SlipStream Internet acceleration technology is the de facto standard in the communication industry. It enables our clients to deliver fast, reliable Internet access and high-value services to end users, regardless of bandwidth constraints. Our superior technology improves the end user's Internet experience, increasing customer satisfaction, productivity and service adoption. As a result, our customers and partners generate more revenue and higher margins.

SlipStream background

The fastest growing acceleration provider in the world, SlipStream Data Inc. is a profitable, privately-owned software development company founded in 2000 and based in Waterloo, Ontario, Canada. SlipStream acceleration products use patented data compression technology to compress, optimize and streamline all Internet content, from Web (including text as HTML, XML, JavaScript and graphics in JPEG, GIF and other formats) to file retrieval (FTP) and email (SMTP, POP3, IMAP and MAPI) plus secure connectivity (HTTPS and VPN). This technology was developed based on research conducted by the world-renowned computer science and computer engineering faculties at the University of Waterloo. Beyond technology, we pride ourselves on service.

We have a reputation for listening to the needs of our customers and partners and for delivering what we promise. We're there when you need us and we work with you to create industry-leading solutions.

The SlipStream Acceleration Engine

Our core technology, the SlipStream Acceleration Engine, is built on advancements in information theory and network architecture research. The Engine uses patented lossless data compression technology, combined with data caching and network optimization, to increase transmission speeds by up to 7 times and decrease bandwidth requirements by up to 98%. SlipStream extends and optimizes the functionality of the Engine to create complete solutions for specific markets. The industry-leading SlipStream SP meets the needs of service providers. We also work with technology partners including wireless application service providers, telecommunications companies, infrastructure providers, handset manufacturers and enterprises – to embed the best data compression in their hardware or software solutions. When combined with their in-depth industry understanding, SlipStream solutions help these partners achieve higher profitability.

SlipStream solutions

SlipStream SP

There's a reason SlipStream SP has the highest adoption rate in the industry. It offers the fastest and most reliable acceleration with the most extensive browser and OS support. And now, with the integration of the SlipIN Platform into SlipStream SP4.0, there's an exceptional opportunity for ISPs and value-added service providers to generate new revenues by delivering a broad selection of proven SlipIN Certified Solutions directly to the desktops of all subscribers.

Faster and better

SlipStream SP integrates seamlessly into your existing architecture and requires minimal customer support, resulting in the lowest total cost of ownership and a fast ROI. Plus, as demand increases, SlipStream SP scales easily. All this, plus SlipStream's reliability and superior acceleration, result in increased service usage, increased customer satisfaction and retention and significantly increased revenue.

The complete solution, including the SlipStream Acceleration Engine and lightweight device clients, encompasses full management and administration capabilities and security and can be fully branded to meet your unique needs. It's a proven way to differentiate your business and increase profits.

SlipIN Platform

Now integrated with SlipStream SP4.0, SlipIN is a new concept in revenue-generating, value-added services for ISPs. The SlipIN Platform is a customizable interface that gives value-added service providers access to more end users, while offering ISPs control over the services they bundle and sell. The easy-to-manage platform delivers lower support requirements and greater profits as service providers quickly and easily roll out more services to their dial, wireless and broadband subscribers. SlipIN Certified Solutions undergo rigorous testing and certification to ensure they work seamlessly within the SlipIN Platform.

The SlipIN certification program offers flexible commitment levels and marketing assistance to value-added service providers. For ISPs, SlipIN certification ensures that the services their customers access deliver an exceptional user experience.

About SlipStream

The fastest growing acceleration provider in the world, SlipStream Data Inc. is a profitable, privately-held company founded in 2000 that develops software to speed information delivery over any network. Using patented data compression technology, SlipStream's acceleration products enable wireless and wireline service providers, enterprises and third-party technology partners to deliver fast, reliable Internet access and high-value services to end users, regardless of bandwidth constraints. SlipStream technology is used by over 2000 service providers in 40 countries.

About GNI

The GNI team draws from years of experience in the field of telecommunications & messaging. Our expertise is in understanding the needs of legacy & secure messaging with contemporary solutions.

As markets and technology continue to evolve, GNI is able to assist both the SME & large corporate clients overcome these

challenges.

Outsourcing has helped many companies avoid wasted investments in technology and solutions that either continue to require investment or are too costly to manage and operate. In addition to our outsourced solutions we offer basic messaging services such as Telex & Fax at competitive rates.
